MEPs call for overall transport sector emissions reduction

A draft resolution has been passed by the European Parliament urging the EU to set a target of reducing CO₂ emissions from the transport sector by 20 per cent to 2020 over 1990 levels. The call comes in a non-legislative resolution that responds to a European commission midterm review of the EU's transport white paper of 2001 – Keep Europe Moving - Sustainable mobility for our continent.
