30 November 2007

Clean Air Power Ltd

("Clean Air Power" or "the Company")

Market Update

Clean Air Power Ltd (AIM:CAP) the developer of Dual-Fuel™ combustion technology that enables heavy-duty diesel engines to run on a combination of both diesel and natural gas provides an update on its recent progress.

In recent months Clean Air Power has seen increased sales momentum for Dual Fuel products within its current product range. The Company has been encouraged by two, previously announced significant incremental orders from existing customers evidently enjoying the benefits of the patented Dual Fuel technology. In Australia, Mitchell West Pty Ltd decided to order an additional 20 conversions following from the earlier 50 conversion order. In the UK, Robert Wiseman Dairies placed an order for 20 conversions after their trial of 2 vehicles earlier in the year.

The Company's Australian income continues to grow as the installation activity to deliver the Mitchell's contract accelerates.

The steady growth of the components business continues and this week the Company is pleased to announce it has won a £0.44m components order for delivery between March 08 and February 09.

The main objective of the company remains to enter into a cooperation agreement whereby the Dual- Fuel™ technology is adopted by a major manufacturer. Clean Air Power has been in discussions with a number of manufacturers over the past two years and now is pleased to report considerable progress has been made with a manufacturer. Although a formal agreement has not yet been made, the company has reason to believe that the discussions could lead to a formal cooperation agreement being reached in the first half of 2008.

It is the intention of Clean Air Power to raise funds before the end of the year to provide additional working capital to support existing operations and early preparation for potential manufacturer activity.

The Company believes that this represents a clear indication that the wider market is reacting positively to the increased sales momentum being achieved by Clean Air Power's Dual-Fuel™ technology.

John Pettitt, CEO, commented "Clean Air Power is very encouraged that both manufacturers and operators alike are recognising the clear benefits of the Company's technology. As diesel prices and focus on carbon and greenhouse gas emissions increase, we believe the market is increasingly appreciating the compelling nature of the Company's Dual-Fuel™ technology".
